

VGP352 – Week 3

⇒ Agenda:

- Quiz #1
- Render to texture
- Reflection mapping
 - Review
 - Rendering to a reflection map
- Improving the reflection model
 - Reflection maps as better lights
 - Fresnel reflections

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Render to Texture

- Several methods exist
 - Render to framebuffer, then copy the result to a texture
 - Use `glCopyTexImage2D`
 - Render to a pixel buffer (pbuffer), then bind to a texture
 - Platform dependent (i.e., is different on Linux, Windows, and Mac OS)
 - Use framebuffer objects to render direct to a texture

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Why render to a texture?

- Many effects can be created by rendering to one or more textures, then using those textures to render the final scene
 - Shadow maps
 - Dynamic environment maps
 - Pre-baking procedural textures

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Copy to Texture

⇒ Very easy:

- Draw to backbuffer
- Copy resulting image to a texture using either `glCopyTexImage2D` or `glCopyTexSubImage2D`
- *That's it*

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Copy to Texture

➤ Problems:

- Must perform extra copies – slow
- Must perform extra buffer clears
- Window must be at least as large as the largest desired texture
- Results can be corrupted if the window is partially obscured
- Can't generate a texture when a frame is partially rendered
 - The back-buffer already has part of the final scene in it!

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Framebuffer Objects

- Warning: FBOs have a fairly steep learning curve
 - The ARB spent over two years developing the interface
 - It builds on the familiar texture interfaces, but is still very different

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Framebuffer Objects

⇒ Create and bind an FBO

```
void glGenFramebuffersEXT(GLsizei n,  
    GLuint *framebuffers);
```

```
void glBindFramebufferEXT(GLenum target,  
    GLuint framebuffer);
```

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Framebuffer Objects

- ⇒ Attach one or more renderable objects to it
 - 1D, 2D, and 3D versions exist

```
void glFramebufferTexture2DEXT (GLenum target,  
    GLenum attachment, GLenum textarget,  
    GLuint texture, GLint level);
```

```
void glFramebufferRenderbufferEXT(  
    GLenum target, GLenum attachment,  
    GLenum renderbuffertarget,  
    GLuint renderbuffer);
```

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Framebuffer Objects

- Attach one or more renderable objects to it
 - 1D, 2D, and 3D versions exist

```
void glFramebufferTexture2DEXT (GLenum target,  
    GLenum attachment, GLenum textarget,  
    GLuint texture, GLint level);
```

```
void glFramebufferRenderbufferEXT(  
    GLenum target, GLenum attachment,  
    GLenum renderbuffertarget,  
    GLuint renderbuffer);
```

Selects how the buffer is used:

- Color buffer: `GL_COLOR_ATTACHMENT0`
- Depth buffer: `GL_DEPTH_ATTACHMENT`
- Stencil buffer: `GL_STENCIL_ATTACHMENT`

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Framebuffer Objects

- After making all of the desired attachments:
 - Disable outputs that don't have attachments
 - Use `glColorMask` or `glDisable` with `GL_DEPTH_TEST` or `GL_STENCIL_TEST`
 - Make sure the FBO is acceptable by calling

```
GLenum glCheckFramebufferStatusEXT(  
    GLenum target);
```
 - Some hardware can't handle some combinations of attachments
 - Some combinations are just wrong
 - Reset the viewport

Draw!

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Framebuffer Objects

- Use textures that were rendered to just like usual
 - You cannot render to a texture layer that might be used for rendering (i.e., no feedback loop)
 - You cannot use `GL_GENERATE_MIPMAPS` with FBO rendered textures

```
void glGenerateMipmapEXT(GLenum target);
```

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Renderbuffers vs. Textures

- ⇒ Two types of buffers can be attached to an FBO:
 - Texture – texturable and renderable
 - Renderbuffer – renderable only
- ⇒ Why do renderbuffers exist?

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Renderbuffers vs. Textures

- ⇒ Two types of buffers can be attached to an FBO:
 - Texture – texturable and renderable
 - Renderbuffer – renderable only
- ⇒ Why do renderbuffers exist?
 - It's the only way to do stencil
 - When FBOs were created, there were no integer textures
 - GL 3.0 adds integer textures, so renderbuffers may eventually be deprecated
 - Driver may be able to use a better format if the object won't be texturable
 - Some hardware needs the whole mipmap stack allocated up-

front

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Renderbuffers

⇒ Similar interface to textures:

```
void glGenRenderbuffersEXT(GLsizei n,  
    GLuint *renderbuffers);
```

```
void glRenderbufferStorageEXT(GLenum target,  
    GLenum internalformat,  
    GLsizei width, GLsizei height);
```

```
void glDeleteRenderbuffersEXT(GLsizei n,  
    const GLuint *renderbuffers);
```

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Dimensions and Dimensionality

- ⇒ Dimensions (i.e., height and width) of all attachments must match
 - This requirement is relaxed in OpenGL 3.0 and `GL_ARB_framebuffer_object`
- ⇒ Dimensionality (i.e., 1D or 2D) of all attachments must match
 - A 2D “slice” of a 3D texture is attached, so it is treated as a 2D texture for this purpose

Reflection Mapping

- Forms of reflection mapping are classified by the shape used to simulate the environment
 - Cylindrical
 - Hemispherical
 - Spherical
 - Cube
 - Dual-paraboloid

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection Mapping – Cube

- Extend \mathbf{r} to intersect unit cube surrounding point

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection Mapping – Cube

➤ Pros:

- Trivial to implement
- Easy to render to reflection map

➤ Cons:

- Requires hardware support
- More difficult to get source images
- Discontinuities at cube-face boundaries

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection Mapping – Cube

- From the point of view of the reflector:
 - Draw each of the 6 on-axis views to separate faces of the cube map
 - Be sure to pick a convenient “space” to draw in so that the reflection map can be used
 - Probably align the axes of the cube map to the world-space

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection Mapping – Paraboloid

- View of environment as reflected by a convex parabolic mirror
 - The *outside* of a satellite dish
 - Reflects 180° of the environment
 - Capture 360° by using two maps
 - Known as dual paraboloid
 - Fairly similar to a hemispherical reflection map

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection Mapping – Paraboloid

- Easily convert reflection vector to 2D texture coordinate for paraboloid map:

$$\begin{pmatrix} s \\ t \\ 1 \\ 1 \end{pmatrix} = \mathbf{A} \cdot \mathbf{P} \cdot \mathbf{S} \cdot \mathbf{M}_n^T \cdot \mathbf{r}^T$$

$$\mathbf{A} = \begin{pmatrix} \frac{1}{2} & 0 & 0 & \frac{1}{2} \\ 0 & \frac{1}{2} & 0 & \frac{1}{2} \\ 0 & 0 & 1 & 0 \\ 0 & 0 & 0 & 1 \end{pmatrix}, \mathbf{P} = \begin{pmatrix} 1 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 \\ 0 & 0 & 1 & 0 \\ 0 & 0 & 1 & 0 \end{pmatrix}, \mathbf{S} = \begin{pmatrix} -1 & 0 & 0 & \mathbf{d}_x \\ 0 & -1 & 0 & \mathbf{d}_y \\ 0 & 0 & 1 & \mathbf{d}_z \\ 0 & 0 & 0 & 1 \end{pmatrix}$$

- \mathbf{d} is the view direction vector
 - $\{0\ 0\ 1\}$ or $\{0\ 0\ -1\}$ depending on the viewing direction
- \mathbf{M}_n is the transformation matrix for normals

Reflection Mapping – Paraboloid

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection Mapping – Paraboloid

- ⇒ From view point of reflector:
 - Draw two images
 - Transform vertexes as usual but:
 - Divide x , y , and z by w
 - Call the magnitude of this vector l
 - Normalize and divide x and y by $(z + 1)$
 - Set z to l remapped to view volume
 - Usual $[0, 1]$ mapping based on near / far
 - Set w to 1.0

Reflection Maps as Lights

- ⇒ Just like reflection mapping:
 - Render the “light” into the reflection map
 - The part of the reflection map that isn't the light is black
 - Can put multiple lights in one reflection map

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection Maps as Lights

⇒ What is the limitation of this simple approach?

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection Maps as Lights

- What is the limitation of this simple approach?
 - Really only works for perfectly mirror-like surfaces
 - Surfaces where the specular exponent approaches ∞
 - Essentially creates an aliasing problem
 - Only one sample is taken from the environment

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection Maps as Lights

- ⇒ If under-sampling is the problem, how can we fix it?

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection Maps as Lights

- If under-sampling is the problem, how can we fix it?
 - Obvious answer: take more samples
 - Filter the samples together
 - The lighting equation supplies the sample weights

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection Maps as Lights

⇒ What is the problem with this technique?

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection Maps as Lights

- What is the problem with this technique?
 - Taking enough samples to get good results is slow
 - Taking few enough samples to be fast gives poor results
- *Remind you of anything?*
 - And what was the solution there?

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection Maps as Lights

- ⇒ Just like texture minification!
 - The answer there was to create pre-filtered versions of the texture called mipmaps
- ⇒ Create new reflection maps:
 - Each texel in the new map is created from *all* of the texels in the old map filtered using weights from the lighting equation
 - This is expensive, but it only has to be done once... and that can be off-line

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection Maps as Lights

⇒ Notes / caveats:

- The new reflection map only includes the specular component
- Must be generated with a constant \mathbf{v} , so the resulting reflection map is view-dependent
- Can create a second map for diffuse lighting
 - Use the diffuse lighting equation
 - Use the surface normal instead of the reflection vector
 - This type of reflection map is called an *irradiance map*

Changing Specular

⇒ What's happening?

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Changing Specular

⇒ What's happening?

- We know specular reflection depends on the relative orientation of the view and reflection vectors
 - That's $\mathbf{v} \cdot \mathbf{r}$ from the Phong lighting model
- It also seems to depend on the relative orientation of the reflection vector and the surface
 - Our current lighting model doesn't account for this!

Fresnel Reflection

- Named after French physicist Augustin-Jean Fresnel
 - It's French... It's pronounced *fray-NELL*
- Light moves at different speeds through different materials
 - The ratio of the speed of light in a vacuum to the speed in a particular material is the *refractive index* of that material
 - Glass has an index of refraction of ~ 1.5

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Fresnel Reflection

- When light passes between material with differing indices of refraction:
 - The light changes velocity
 - Both speed *and* direction change
 - Wave theory of light: the change in speed causes the change in direction
 - Some of the light is reflected
 - The remaining light is refracted
 - This light passes into the material

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Wave Theory – Refraction

- When light leaves one material and enters another, it changes direction
 - At the *interface* the speed changes, and the light bends

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Wave Theory – Refraction

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection vs. Refraction

- Ratio of reflection to refraction depends on the angle between the light and the normal at the interface
 - The larger the angle between the normal and the light, the more light is reflected
 - The effect is like a rock skipping on water
 - The greater the angle between the rock's velocity and the water's surface tangent, the more skipping

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection vs. Refraction

~~Large specular highlight~~
Lots of reflection

~~Smaller specular highlight~~
Some reflection

~~No specular highlight~~
No reflection

20-October-2010

Reflection Math

⇒ The fraction of light reflected, $R(\theta)$, is:

$$R(\theta) = \frac{1}{2} \left(\frac{g-c}{g+c} \right)^2 \left(1 + \left(\frac{c(g+c) - (n_i/n_t)^2}{c(g-c) + (n_i/n_t)^2} \right)^2 \right)$$

Where:

$$c = (n_i/n_t) (\cos \theta)$$

$$g = \sqrt{1 + c^2 - (n_i/n_t)^2}$$

- n_i is the refractive index of the first material
- n_t is the refractive index of the second material
- θ is the angle between the surface normal and the light vector

Sometimes $R(\theta)$ is written as F

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Reflection Math

- ⇒ Yewouch! That math is complex and expensive
- ⇒ A good approximation exists:

$$R(\theta) = R_0 + (1 - R_0)(1 - \cos \theta)^5$$

- R_0 is the reflectance at normal incidence
 - True value of the Fresnel term when $\theta = 0$
 - Calculated in the application and passed in as a uniform
- Known as “Schlick's approximation”

20-October-2010

Fresnel Reflection in Lighting

⇒ Simulate a diffuse surface with a shiny coating:

$$\mathbf{k} = (1 - F)\mathbf{k}_d + F\mathbf{k}_s$$

- The Fresnel term determines what part of the light is reflected by the specular coating
- The light that isn't reflected by the specular coating is reflected by the diffuse layer

20-October-2010

© Copyright Ian D. Romanick 2009, 2010

Fresnel Reflection and Materials

- Dielectric materials exhibit a strong Fresnel factor
 - Dielectric means that it does *not* conduct electricity
 - Plastic, glass, automotive paint, etc. are dielectric and have strong Fresnel factors
 - Metal is a conductor and has almost no Fresnel factor
 - This fact will be very important later...
