Getting the Sources

```
git clone https://github.com/uyuni-project/uyuni/
```

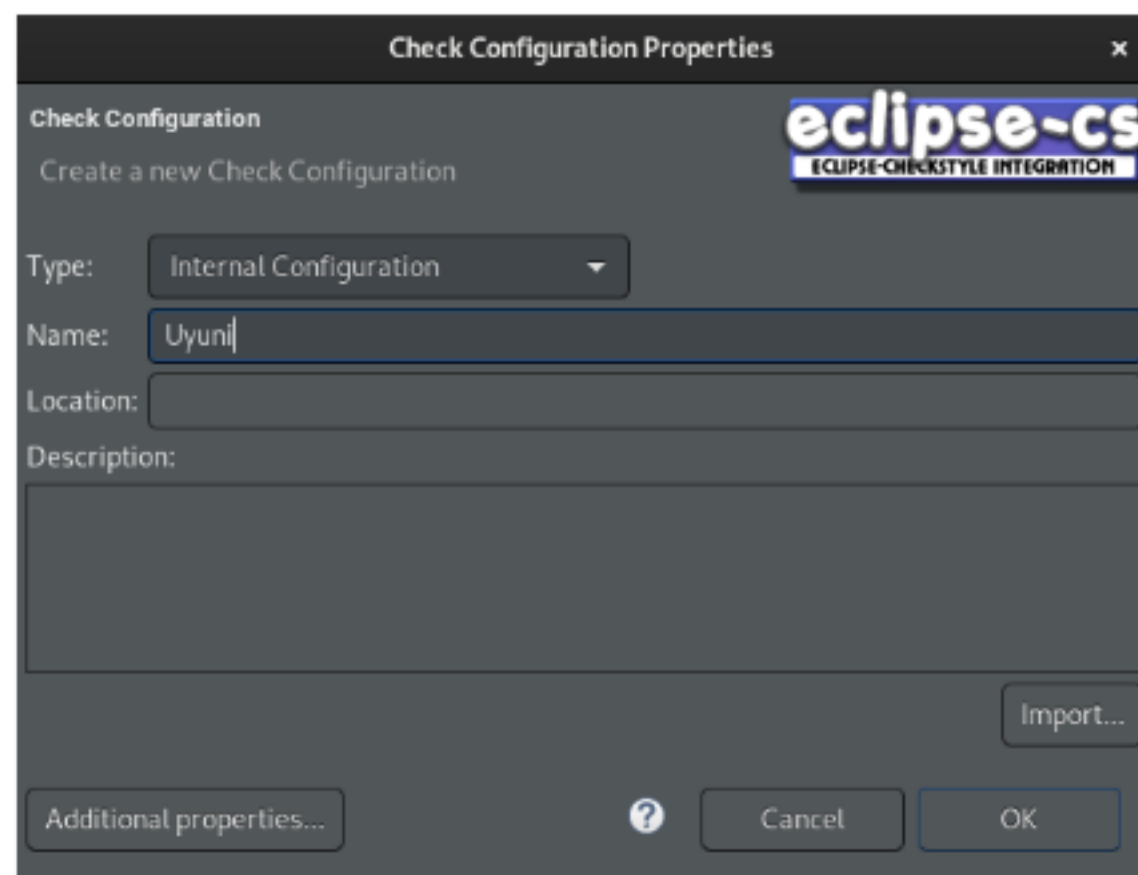

```
cd uyuni/java  
ant make-eclipse-project
```

File > Import > General > Existing Projects into Workspace

Checkstyle Setup

- In *Window > Preferences > Checkstyle > New*
 - Internal Configuration
 - Name: *Uyuni*
 - Import `conf/eclipse/checkstyle_eclipse.xml`

<https://github.com/uyuni-project/uyuni/wiki>

  product_version = "uyuni-master"  
  name = "minion"  
  image = "opensuse151"  
  auto_connect_to_master = true  
  ssh_key_path = "../salt/controller/id_rsa.pub"  
  memory = 512  
}
```

Running Unit Tests

Running Unit Tests

Building the test containers

```
sudo systemctl start docker  
cd uyuni/susemanager-utils/testing/docker/master  
make public_containers
```

Running Unit Tests

Building the test containers

```
sudo systemctl start docker  
cd uyuni/susemanager-utils/testing/docker/master  
make public_containers
```

Running the unit tests

```
cd uyuni/java  
make -f Makefile.docker dockerrun_pg  
mkdir -p /var/log/rhn/  
mkdir -p /srv/susemanager
```

Running Unit Tests

Building the test containers

```
sudo systemctl start docker  
cd uyuni/susemanager-utils/testing/docker/master  
make public_containers
```

Running the unit tests

```
cd uyuni/java  
make -f Makefile.docker dockerrun_pg  
mkdir -p /var/log/rhn/  
mkdir -p /srv/susemanager
```

Junit3 Run Configuration

```
-Drhn.config.dir=${workspace_loc:spacewalk-java}/buildconf/test/  
-Dlog4j.threshold=debug
```

Running Unit Tests

Building the test containers

```
sudo systemctl start docker  
cd uyuni/susemanager-utils/testing/docker/master  
make public_containers
```

Running the unit tests

```
cd uyuni/java  
make -f Makefile.docker dockerrun_pg  
mkdir -p /var/log/rhn/  
mkdir -p /srv/susemanager
```

Junit3 Run Configuration

```
-Drhn.config.dir=${workspace_loc:spacewalk-java}/buildconf/test/  
-Dlog4j.threshold=debug
```

```
ant -f manager-build.xml test
```

Cucumber Tests

Cucumber Tests

- UI / integration tests

Cucumber Tests

- UI / integration tests
- Ruby + [cucumber](#)

Cucumber Tests

- UI / integration tests
- Ruby + [cucumber](#)
- Special Sumaform setup
 - `terraform workspace --help`
 - `ln -s main.tf main.tf.test`
 - Controller
 - Test client + minion

Cucumber Tests

- UI / integration tests
- Ruby + [cucumber](#)
- Special Sumaform setup
 - `terraform workspace --help`
 - `ln -s main.tf main.tf.test`
 - Controller
 - Test client + minion
- On the controller VM:
 - Edit `spacewalk/testsuite/run_sets/testsuite.yml`
 - `run-testsuite`
 - `cucumber spacewalk/testsuite/features/my_feature.feature`

Test Packages using OBS

Test Packages using OBS

- Branch a package in `systemsmanagement:Uyuni:Master`

Test Packages using OBS

- Branch a package in `systemsmanagement:Uyuni:Master`

```
export OSCAPI=https://api.opensuse.org
export OBS_PROJ=home:you:branches:systemsmanagement:Uyuni:Master
export TEST=--test
cd uyuni/rel-eng
./build-packages-for-obs.sh && ./push-packages-to-obs.sh
```

Writing Tests

- Feature / Scenario / Steps
 - English only
 - Code in `testsuite/features/step_definitions`
- Existing steps in `testsuite/documentation/cucumber-steps.md`
- New **idempotent** features in `testsuite/features/secondary`

Test Example

Test Example

```
@virthost_kvm
Scenario: Resume a KVM virtual machine
  Given I am on the "Virtualization" page of this "kvm-server"
  When I wait until table row for "test-vm" contains button "Resume"
  And I click on "Resume" in row "test-vm"
  Then I should see "test-vm" virtual machine running on "kvm-server"
```

Test Example

```
@virthost_kvm
Scenario: Resume a KVM virtual machine
  Given I am on the "Virtualization" page of this "kvm-server"
  When I wait until table row for "test-vm" contains button "Resume"
  And I click on "Resume" in row "test-vm"
  Then I should see "test-vm" virtual machine running on "kvm-server"
```

```
Then(/^I should see "([^\"]*)" virtual machine (shut off|running|paused)
  on "([^\"]*)"$/x) do |vm, state, host|
  node = get_target(host)
  repeat_until_timeout(message: "#{vm} virtual machine on #{host} "\
    "never reached state #{state}") do
    output, _code = node.run("virsh domstate #{vm}")
    break if output.strip == state
    sleep 3
  end
end
```
